Pond: LP-003:
L-86" x W-62" x H-12" -
Approx. Weight: 63lbs
Approx. Capacity:
80-100 gal

Patio Pond Kits have these major components:

- **Rock Pond Liner Base** – (This is the piece that actually holds water).
- **Rock Surround** – (This is the piece that looks like a large hollow boulder).
- **Waterfall**
- **Pump cover rock** (optional extra).

Installation Guide

- Begin by placing the rock liner on a relatively flat and level surface.
- Place the rock surround over the rock liner (sometimes when placing the surround over the pond base, it may be necessary to bend the top edge in one or two places to allow the surround to sit flat. This is best to be done before filling the pond with water).
- Now is the time to look at the alignment to be sure that the patio pond looks good in your setting.
- Place the waterfall on the rock surround to the most desirable and level position.
- Your pond should now be ready to fill with water.
- Connect the water pump to the waterfall. Plug in the pump – we recommend using a GFCI protected, outdoor rated plug.
- Please consult with a qualified electrician if you are unsure of your connection.
- Pump cover rocks are also available to help you disguise the rock and tubing. This is simply placed on top of your pump and tubing to continue the natural appeal.
- Rocks and pebbles can be placed on the water outlet of the waterfall as well as scattered about the surface of the waterfall – this helps to disperse the water more evenly.
- Now is the time to use plants and water plants together with decoration ornaments of your choice.
- After water has been conditioned, fish can be added.
